

## **About Sealand – A Maersk Company**

When you join our team, you join a truly diverse, global organization in a fast-moving, values-based, work environment where you can grow on the job, tap into industry-leading talent development initiatives, enjoy working with your colleagues, and broaden your world view through our international network. We strive to deliver the best environment for the right people while building on a winning formula of collaboration, people orientation, customer orientation and agility.

## **Sealand Internship Program Overview**

Sealand offers year-round, unique internship or co-op opportunities to both undergraduate and graduate students. Through a three or four-month assignment, students receive a highly visible, high impact experience. Interns/co-ops are matched with a manager and project.

Each project and assignment solve real business challenges with outlined deliverables and milestones. Assignments range from supply chain management, commercial and client facing, to finance, and network services and operations. Each student is assigned to work within a team where communication skills and collaboration are critical.

Projects are cross-functional and provide leadership experience, exposure to industry know-how, and have potential for future career opportunities. Students are backed with a support network of an assignment manager, program lead, and HR advisor. The rotation concludes with a final presentation to the Executive Board where you boast about your successes.

## **What You Will be Doing**

Interns will join a start-up team with ultimate responsibility to ensure end-to-end delivery of Cold Chain solutions to our customers. You will quickly become immersed in learning about Sealand's logistics and services product offerings. You will then engage with internal and external stakeholders to understand their needs and challenges. Each member of the start-up will have a shared responsibility to create processes and identify solutions to ensure a great customer experience.

## **What We Need**

While desired students will have sound knowledge of Supply Chain systems and processes, the most important qualities required include an appetite for learning, can-do attitude, and excellent communication and collaboration skills.
